

WIRELESS SITE SURVEY PROCESS

Learn more about all of our solutions at www.abetech.com.

Take advantage of our special offer: We will credit 20% of your survey costs back to you for qualifying installation and/or hardware purchases.

Information-gathering conference call

1

We will meet with you to review your current situation, performance problems, and desired outcomes.

- + The number of wireless users and type of devices currently supported on your network and any plans you have for change.
- + Any and all network issues: poor connectivity, interference, session interruptions, slow response that you're experiencing.
- + Your existing infrastructure and applications supported.

Site visit

A certified engineer will visit your location to perform your comprehensive site survey.

- + The number and types of devices and applications running on your wireless network.
- + Current inventory amounts and any expected seasonal changes that could add volume to the network.
- + Plans for future deployment of VoIP applications, robotics, autonomous devices and/or access points.

2

Analysis and feedback

3

Our team of experts will prepare and send to you a comprehensive report that includes:

- + Results, findings, proposed remedies, and recommendations for corrective actions.
- + We will schedule a meeting to review the report, answer your questions, and discuss next steps.
